## Matters of Life and Death By John Cairns

Cancer has become the scourge of the twentieth century. It was always part of the human condition, but until recently it was not a common cause of death because most people died from the infectious diseases. Now that so many of us will live long enough to develop cancer, we need to learn as much about it as we can. This requires some understanding of molecular biology. John Cairns has made significant contributions to cancer research, molecular biology, and virology. He believes that it is possible to explain what is known about cancer and about molecular biology in terms that are easily understood by people with little or no scientific training. In this fascinating book, he explores the revolution in public health, the origins and principles of molecular biology, and our emerging understanding of the causes of cancer. Finally, he discusses how these developments are likely to affect future generations.

As Cairns points out, the last two hundred years have altered our life expectations beyond all recognition. Even in the less developed nations of the world, people are starting to believe that everyone ought to be able to live into old age and be protected from the major causes of premature death. This change in our expectations is one of the major benefits of technology and the biological sciences. But the resulting explosion in the human population ultimately threatens everything we have gained by scientific progress.

## Editorial Review

From [Booklist](#)

Although this is a set of essays rather than an autobiography--"I do not have the proper temperament for a good book about myself," Cairns says--several incidents of the distinguished physician-researcher's life surface amusingly; for instance, his description of Nobel laureate Max Delbruck's sniff of disdain when he learns that Cairns is an M.D., not a Ph.D., is delightful. Primarily, though, using cancer as the thread that binds the essays together, Cairns shows how the party line on the causes of cancer has changed and how this has affected the choice of subjects for research and the relationship between clinical and research medicine. He examines the history of molecular biology, using primarily simple, informative drawings to augment his lucid prose. He argues that the war against cancer would have met with more success had it emphasized prevention rather than treatment. Well documented, the entire book has much to offer for serious general readers interested in hard medical science topics. *William Beatty*

Review

### One of *Choice's* Outstanding Academic Titles for 1997

"A collection of beautifully written, reflective essays. . . . Cairns's writing is a fine example of how science can be presented to the general reader in an extremely scholarly way, and why writing of this kind can be of equal interest to fellow scientists, reflecting as it does a remarkable imagination and intellect. . . . [A] reflective and thoughtful account. . . ."--**Sir David Weatherall**, *The Times Higher Education Supplement*

"[Cairns's] lucid exposition shows how experiments, observations, and calculations support some of the grand conclusions of modern biology. He offers fresh--although sometimes controversial--insights."--**Joel E. Cohen**, *Nature*

"A brilliant and impressive analysis. . . . [t]his book should be in everyone's personal library for many reasons; first, because Cairns is a lyrical writer and, second, he writes about science and molecular biology based on vast scientific knowledge, stressing the importance of history and of appreciating ultimate causes for all aspects of our lives and all that affects us. Interwoven are his perceptions of the beautiful and gracious things in life--art, music, literature--all with exquisite clarity. *Matters* is a joy to read."--**Choice**

"Although this is a set of essays rather than an autobiography. . . . several incidents of the distinguished physician-researcher's life surface amusingly. . . . Well documented, the entire book has much to offer for serious general readers. . . ."--**Booklist**

## **Users Review**

### **From reader reviews:**

#### **Marvin Gamez:**

Here thing why this kind of Matters of Life and Death are different and reliable to be yours. First of all examining a book is good however it depends in the content than it which is the content is as delicious as food or not. Matters of Life and Death giving you information deeper and in different ways, you can find any reserve out there but there is no publication that similar with Matters of Life and Death. It gives you thrill studying journey, its open up your current eyes about the thing which happened in the world which is probably can be happened around you. You can actually bring everywhere like in recreation area, café, or even in your method home by train. If you are having difficulties in bringing the imprinted book maybe the form of Matters of Life and Death in e-book can be your alternate.

#### **Eric Ray:**

The particular book Matters of Life and Death will bring one to the new experience of reading a new book. The author style to elucidate the idea is very unique. When you try to find new book to see, this book very ideal to you. The book Matters of Life and Death is much recommended to you to learn. You can also get the e-book from official web site, so you can easier to read the book.

#### **Carlos Quirk:**

Do you have something that you prefer such as book? The book lovers usually prefer to decide on book like comic, short story and the biggest some may be novel. Now, why not trying Matters of Life and Death that give your pleasure preference will be satisfied through reading this book. Reading habit all over the world can be said as the way for people to know world considerably better then how they react when it comes to the world. It can't be stated constantly that reading addiction only for the geeky person but for all of you who wants to always be success person. So , for all you who want to start studying as your good habit, you may pick Matters of Life and Death become your current starter.

#### **Lori Barnes:**

As a scholar exactly feel bored for you to reading. If their teacher asked them to go to the library or make summary for some publication, they are complained. Just very little students that has reading's soul or real their passion. They just do what the instructor want, like asked to go to the library. They go to right now there but nothing reading critically. Any students feel that reading is not important, boring in addition to can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important in your case. As we

know that on this time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. So , this Matters of Life and Death can make you truly feel more interested to read.
