
Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications

From Elsevier

Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications From Elsevier

Comprehensive Inorganic Chemistry II reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, *Comprehensive Inorganic Chemistry II* includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on, with a different viewpoint and format, from our 1973 work, *Comprehensive Inorganic Chemistry*, edited by Bailar, Emeléus, Nyholm, and Trotman-Dickenson, which has received over 2,000 citations. The new work will also complement other recent Elsevier works in this area, *Comprehensive Coordination Chemistry* and *Comprehensive Organometallic Chemistry*, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable, long-standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts, under the guidance of the Volume Editors and the Editors-in-Chief. The articles are written at a level that allows undergraduate students to understand the material, while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources (and the original work), but instead concentrate on applications of the elements and their compounds.

- Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields, such as: biological inorganic chemistry, materials chemistry, solid state chemistry and nanoscience
- Inorganic chemistry is rapidly developing, which brings about the need for a reference resource such as this that summarise recent developments and simultaneously provide background information
- Forms the new definitive source for researchers interested in elements and their applications; completely replacing the highly cited first edition, which published in 1973

- Rank: #6257347 in Books
- Published on: 2013-12-10
- Original language: English
- Number of items: 1
- Dimensions: 11.25" h x 10.00" w x 20.00" l, .0 pounds
- Binding: Hardcover
- 7544 pages

Editorial Review

From the Back Cover
Comprehensive Inorganic Chemistry II reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas, *Comprehensive Inorganic Chemistry II* includes biological inorganic chemistry, solid state chemistry, materials chemistry, and nanoscience. The work is designed to follow on, with a different viewpoint and format, from our 1973 work, *Comprehensive Inorganic Chemistry*, edited by Bailar, Emeléus, Nyholm, and Trotman-Dickenson, which has received over 2,000 citations. The new work will also complement other recent Elsevier works in this area, *Comprehensive Coordination Chemistry* and *Comprehensive Organometallic Chemistry*, to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable, long-standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds, or applications. Chapters are written by teams of leading experts, under the guidance of the Volume Editors and the Editors-in-Chief. The articles are written at a level that allows undergraduate students to understand the material, while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements, which is available from many sources (and the original work), but instead concentrate on applications of the elements and their compounds.

About the Author
Jan Reedijk is emeritus Professor of Chemistry at Leiden University and part-time professor of Chemistry at King Saud University Riyadh. He has authored and co-authored over 1100 research papers in molecular inorganic chemistry areas, like coordination chemistry, biomimetic chemistry, anticancer metal compounds and homogeneous catalysis. His work has been honored by a Max Planck Award, and a Royal Knighthood to the order of the Dutch Lion. He is also an elected Member of the Royal Netherland Academy of Sciences, the Academia Europaea and the Finnish Academy of Sciences. He has been a founding editor of the European Journal of Inorganic Chemistry, and still belongs to the editorial board of a number of scientific journals. He has been the Executive Secretary of the International Conferences on Coordination Chemistry (1988-2012), and served as chair or on organizing committees of many other international conferences. He is President-elect of the inorganic Chemistry Division of the International Union of Pure and Applied Chemistry (IUPAC) and has been serving on several IUPAC Committees. He has also been and is still active in a number of European COST actions in Chemistry. For the Royal Netherlands Chemical Society he acted as vice-president and president, and he has also served on the Netherlands Foundation of Chemical Research. During his career he spent sabbatical periods in Cambridge, Strasbourg, Louvain, Münster, Dunedin and Torun. He has been the Director of the Leiden Institute of Chemistry from 1993-2005.

Kenneth Poeppelmeier studied chemistry at the University of Missouri-Columbia from 1967 to 1971 (B.S. Chemistry). From 1971 to 1974, he was an Instructor in Chemistry at Samoa College in Western Samoa as a United States Peace Corps volunteer. He joined the research group of John Corbett at Iowa State University after leaving the Peace Corps and received his Ph.D. in 1978. He then joined the research staff of Exxon Research and Engineering Company, Corporate Research Science Laboratory, where he worked with John Longo and Allan Jacobson on the synthesis and characterization of mixed metal oxides and their application in heterogeneous catalysis. He joined the chemistry faculty of Northwestern University in 1984 where he is now the Charles E. and Emma H. Morrison Professor of Chemistry and, currently, the Director of the Center for Catalysis and Surface Science (CCSS) at Northwestern University. He also serves as the Associate Division Director for Science in the Chemical Sciences and Engineering Division at Argonne National

Laboratory. Professor Poeppelmeier has published over 300 research papers and supervised approximately 100 Ph.D. and PD students in the area of inorganic and solid state chemistry. Professor Poeppelmeier has been an associate editor for the American Chemical Society journal Inorganic Chemistry for over 20 years and has served on the editorial boards of several journals in his field, including the Journal of Alloys and Compounds, CHEMtracks, Chemistry of Materials, Journal of Solid State Chemistry, and Journal of Solid State Sciences. He is a Fellow of the American Association for the Advancement of Science (AAAS) and Japan Society for the Promotion of Science (JSPS) and has been a Lecturer for the National Science Council of Taiwan (1991), Natural Science Foundation of China (1999) and Chemistry Week in China (2004), Institut Universitaire de France Professor (2003), Visitantes Distinguidos Universid Complutenses Madrid (2009), and more recently was awarded a Visiting Professorship from the Chinese Academy of Sciences (2011).

Users Review

From reader reviews:

Vivian Bennett:

Have you spare time for just a day? What do you do when you have far more or little spare time? Yep, you can choose the suitable activity for spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to often the Mall. How about open or even read a book titled Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications? Maybe it is to become best activity for you. You already know beside you can spend your time together with your favorite's book, you can smarter than before. Do you agree with it is opinion or you have other opinion?

Shannon Harvey:

Typically the book Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications will bring someone to the new experience of reading the book. The author style to clarify the idea is very unique. Should you try to find new book to study, this book very appropriate to you. The book Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications is much recommended to you to see. You can also get the e-book through the official web site, so you can more readily to read the book.

Gene Baker:

The reserve untitled Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications is the reserve that recommended to you to read. You can see the quality of the guide content that will be shown to an individual. The language that article author use to explained their ideas are easily to understand. The article writer was did a lot of analysis when write the book, hence the information that they share to you is absolutely accurate. You also could possibly get the e-book of Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications from the publisher to make you much more enjoy free time.

Connie Hockaday:

Your reading 6th sense will not betray anyone, why because this Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications book written by well-known writer whose to say well how to make book which can be understand by anyone who also read the book. Written inside good manner for you, dripping every ideas and producing skill only for eliminate your own hunger then you still question Comprehensive Inorganic Chemistry II, Second Edition: From Elements to Applications as good book not simply by the cover but also by the content. This is one reserve that can break don't ascertain book by its protect, so do you still needing yet another sixth sense to pick this particular!? Oh come on your reading through sixth sense already alerted you so why you have to listening to yet another sixth sense.
