Editorial Review

From the Inside Flap
Preface

Software architecture is an emerging discipline and an exciting career path for software professionals. We encourage both new and experienced practitioners to read this book as an aid to becoming better software architects. You may have noticed that most software books today do not say much about software architecture. Here, in this volume, we've concentrated the knowledge that you need to be the most effective architect possible.

As co-authors, we have lived through the experience of graduating from "member of technical staff" developers to becoming practicing software architects at the most senior levels of our respective companies. We are technical people, not managers, and we enjoy the technical nature of our work. We enjoy parity of salary and benefits with the senior managers at our respective firms. In other words, we are none-the-worse-for-wear as a consequence of choosing a software architecture career. We think that many of our readers would like to gain from our experience. Hence this book.

This is more than a book about software architecture. It is a field manual that can train you. We choose the pseudomilitary style, because it embodies an essential attitude. As a software architect, you need many survival skills—some technical, some political, some personal. While neither author has military experience, we have seen software architecture become a battleground in many ways. It is a battleground of ideas, as developers compete to forward their own comcepts. It is a battle ground for control of key design decisions that may be overruled by managers or developers, perhaps covertly. It is a battleground with many risks, since architects are responsible for a much wider range of technical and process risks than most managers or individual developers.

If you are a practicing software architect, we know that you are a busy professional. After buying this book, we would suggest that you peruse the table of contents and the index for topics that are new to you. Focus on those sections first. When you have time, we suggest that you attempt a cover-to-cover read-through, to familiarize yourself with all of the covered topics and terminology.

If you are new to architecture and want to become a software architect, we suggest that you do a cover-to-cover read-through beginning with the first chapter. Work the exercises provided, which will add an experiential learning element to your experience base.Raphael Malveau
Thomas J. Mowbray, Ph.D.

From the Back Cover

The completely updated "field manual" for becoming a better software architect!

The crucial skills you need to survive and thrive as an enterprise software architect! Fully updated for the latest techniques-from lightweight methods and architectural layers to Model-Driven Architecture and UML 2.0!

In this book, Raphael Malveau and Thomas J. Mowbray share up-to-the-minute insights and practical

solutions for all the key challenges of building enterprise software systems with objects, components, and Internet technologies. You'll master today's best technical and business practices for the entire project lifecycle as you discover how to avoid crucial pitfalls and costly errors. Coverage includes:

- Choosing the right architectural model for your project
- Executing heavyweight and lightweight approaches to software architecture
- Understanding the architectural issues associated with open source development
- Managing complexity, scalability, reliability, security, latency, and flexibility
- Making the most of abstraction, refactoring, and architectural prototyping
- Leveraging proven design patterns and anti-patterns
- Effective prototyping, business-case development, and project leadership
- Coordinating smoothly with project managers and teams
- Managing your own career as a software architect

With hands-on exercises, real-life war stories, and a take-no-prisoners attitude, Software Architect Bootcamp, Second Edition, won't just help you become a great software architect: it'll help you become a true technical leader of your organization.

About the Author

RAPHAEL MALVEAU, a software architect and consultant based in Alexandria, VA, currently serving as Technical Director for SRA International working to modernize several mission-critical enterprise systems in the Federal government. Previously, as Chief Scientist and Strategic Architect at both startup and major established IT companies, he engineered advanced component architecture best practices that led to the creation of several industry-leading software products.

DR. THOMAS J. MOWBRAY is the Chairman of the Component Management Group and Founding Board member of the Worldwide Institute of Software Architects. He is the author of four books on distributed components and software architecture.

Users Review

From reader reviews:

Ruth Brown:

Nowadays reading books be than want or need but also work as a life style. This reading behavior give you lot of advantages. Advantages you got of course the knowledge even the information inside the book which improve your knowledge and information. The info you get based on what kind of book you read, if you want drive more knowledge just go with training books but if you want feel happy read one using theme for entertaining such as comic or novel. Often the Software Architect Bootcamp (2nd Edition) is kind of book which is giving the reader erratic experience.

Howard Foster:

This Software Architect Bootcamp (2nd Edition) are reliable for you who want to become a successful person, why. The key reason why of this Software Architect Bootcamp (2nd Edition) can be one of several great books you must have is definitely giving you more than just simple reading food but feed anyone with

information that perhaps will shock your before knowledge. This book is definitely handy, you can bring it everywhere you go and whenever your conditions throughout the e-book and printed types. Beside that this Software Architect Bootcamp (2nd Edition) forcing you to have an enormous of experience including rich vocabulary, giving you tryout of critical thinking that could it useful in your day exercise. So , let's have it and enjoy reading.

Diane Morgan:

A lot of people always spent their very own free time to vacation or even go to the outside with them friends and family or their friend. Are you aware? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. In order to try to find a new activity that is look different you can read a book. It is really fun in your case. If you enjoy the book which you read you can spent all day every day to reading a e-book. The book Software Architect Bootcamp (2nd Edition) it is rather good to read. There are a lot of people that recommended this book. These were enjoying reading this book. When you did not have enough space to create this book you can buy the particular e-book. You can m0ore easily to read this book through your smart phone. The price is not very costly but this book has high quality.

Rebecca Bonnett:

People live in this new day of lifestyle always make an effort to and must have the free time or they will get wide range of stress from both way of life and work. So , if we ask do people have time, we will say absolutely without a doubt. People is human not only a robot. Then we ask again, what kind of activity are there when the spare time coming to anyone of course your answer can unlimited right. Then ever try this one, reading publications. It can be your alternative with spending your spare time, the particular book you have read will be Software Architect Bootcamp (2nd Edition).
