For any intervention to be successful, an accurate diagnosis must be followed by a carefully planned and specific rehabilitation program to both the affected area and its related structure. This approach must take into consideration the structure involved and the stage of healing. *Dutton's Orthopaedic Examination, Evaluation, and Intervention* emphasizes the appropriate use of manual techniques and therapeutic exercise based on these considerations. The correct applications of electrotherapeutic and thermal modalities are outlined throughout as adjuncts to the rehabilitative process.

The content reflects the consistent, unified voice of a single author – a prominent practicing therapist who delivers step-by-step guidance on the examination of each joint and region.
